- ✓ Landscape and designing
- ✓ Soil quality analysis
- ✓ Species selection
- ✓ Miyawaki Plantation
- ✓ Monitoring and Evaluation

WHAT WE DO?

LANDSCAPE AND DESIGN

Our team will work with you to create a personalized landscape plan that reflects your style and preferences. This includes a site visit, design concept, and final detailed plan.

SOIL QUALITY ANALYSIS

We conduct a comprehensive analysis of your soil to understand its composition, nutrient levels, and suitability for different plant varieties. This personalized approach ensures we recommend the best course of action for your specific green space.

NATIVE SPECIES SELECTION

Our experts work with you to select the perfect plant varieties based on your desired aesthetics, soil conditions, and preferred level of maintenance. We prioritize native species that create a thriving ecosystem and attract native biodiversity.

THE MIYAWAKI PLANTATION

We guide you through the Miyawaki method, customizing the plan to your specific site and goals. This ensures optimal growing conditions for a dense, flourishing forest.

MONITORING AND EVALUATION

We partner with you to monitor your greening project's progress, track plant growth, and adapt the plan as needed. This ensures long-term success and a flourishing ecosystem.

Adding Science to Conservation

WHY CHOOSE US?

Environmental Enhancement: Improve air & water quality, reduce soil erosion, and create native biodiversity habitat

Increased Property Value: Landscaped spaces add beauty and value to your property

Reduced Energy Costs: Well-placed trees can provide shade and cool your surroundings

Community Beautification: Contribute to a greener, healthier environment for everyone

Scientifically-Driven Results: Our services are grounded in scientific principles and proven methodologies, ensuring long-term success and maximizing the environmental benefits of your greening project.
